Digital Trust

It's no secret that data is the lifeblood of today's modern economy. The economic dependency on the digital world is directly linked to the trust that users and consumers have in it.

We call this Digital Trust. This is the level of confidence users have in technology to enable a high functioning cyber-physical world. It is earned by providing secure, private, safe and reliable access to all kinds of technology and platforms for both personal and corporate use.

It's ultimately this level of trust that we all need to protect with effective privacy and security controls. This datasheet describes how we have bolstered our privacy services portfolio with enterprise grade cyber security solutions at an affordable price to help you accelerate trust within your customer base and industry.

Challenges

Australia is now the 3rd most cyber attacked nation in the world

Businesses are losing the battle against ransomware / malware

Malware is becoming undetectable and detection is no longer a solution

Every 10 minutes a new attack is reported to the Australian government

What if you could stop the breach?

What if you could use advanced containment technology that stops unknown files from writing to the disk, COM Interface and Registry?
What if you had access to an affordable toolset that analysed every unknown file in real-time and protected your employees and prevented a breach?

What if you could deploy this toolset so quickly that your protection would be active within hours?

Enhanced Security Operations (SOAR)

Proactive Threat Hunting (HUNT)

Secure Endpoint (24x7 EDR)

Secure Network (Cloud-based SIEM)

Threat Intelligence Feeds

24x7 Security Operations Centre (SOC)

We know that medium sized businesses carry just as much risk as large corporates when it relates to sensitive data. But they don't have access to quality and affordable security solutions to keep their businesses safe.

Meanwhile, hackers don't discriminate!

24x7 Security Operations Centre (SOC)

Our SOC service is an advanced yet affordable cybersecurity service that operates 24x7x365 provided by Privacy Bureaux. Our industry certified security experts extend threat monitoring and threat hunting from endpoints to network and cloud. Our team of analysts investigate any incidents by integrating relevant networking log and security sensor events, correlating, analysing, and enriching alerts to help you focus your security remediation efforts and ensure you reduce risk to your business.

Secure Endpoint

The endpoint is the new perimeter and needs to always be secure. Our advanced endpoint protection solution with auto-containment technology secures your endpoint by restricting threats of their write privilege to the hard drive, CPU, and registry. We provide you accurate insight on all files in your network at lightning speed. We also provide continuous real-time visibility of your endpoints with detection & response 24x7x365, which helps identify attacks quickly with accurate root cause analysis for effective remediation.

Secure Network

Secure Network is a proprietary cloud based SIEM that uses a network sensor to monitor network and systems for malicious activities or policy violations that can lead to network intrusions. Our team of analysts investigate incidents and use Artificial Intelligence within a proprietary cloud based SIEM to correlate rules from our Threat Lab to proactively alert you to any possible compromise. We use an innovative approach which balances enterprise design with affordability. This delivers customers a sophisticated capability without any architecture complexity and overheads.
Enhanced Security Operations

Our Enhanced Security Operations team delivers a SOAR capability (Security Orchestration Automation and Response) to advanced customers who want to rapidly validate threats across all existing products and disrupt the kill chain. Using custom playbooks or our existing library of pre-defined playbooks, we automate costly investigation and remediation activities to focus the effort on more critical investigations. Our SOAR package is led out by a local Security Success Manager to ensure there is an ongoing focus on continuous improvement.

Proactive Threat Hunting

Our Proactive Threat Hunting service is designed to search for threats which remain undetected in your network. You might have an adversary inside your network who does not trigger your traditional detection rules whilst silently retrieving confidential information. When combined with our threat intelligence subscription, our specialist team with decades of experience working for the largest corporations around the world, use advanced techniques to help you implement a more proactive cyber defence strategy.

Threat Intelligence

Our Threat Intelligence subscription provides early-stage insights into emerging threats before they become incidents. We use a proprietary approach which complements our global intelligence partnerships to analyse tools, tactics and techniques and define actionable steps to help you manage threats more effectively when its matters most. The subscription is modular and provides customers flexibility to tailor our intelligence offer to their level of maturity and / or appetite.

## Not 100% sure? Ask us about our 30-day proof of value.

This is an offer to deploy test our Advanced containment technology on a select number of critical endpoints for you to see how you can prevent costly breaches for 30 days at no cost. Conditions Apply.

Accelerate Trust
with Privacy & Cyber Security

We solve the complex privacy and cyber security challenge for medium sized businesses differently by design. We do this by operating at the intersection of data security, cyber security and privacy regulation.

We approach privacy and security in a unique way to build affordable and effective solutions to allow companies of all sizes to be able to protect themselves more effectively and accelerate trust in their brand to compete in today's digital domain.

Our portfolio has been expanded to help customers stop breaches with groundbreaking auto containment technology that neutralizes ransomware, malware, and cyber-attacks. Our complete cloud-native framework delivers a zero-trust architecture with active breach protection for the most comprehensive defense against zero-day threats.

Join a platform of 120+ million other endpoints who get 24/7 support from skilled security professionals and deliver zero-trust security prevention at the endpoint level.

24/7
Always-on 24/7 monitoring with real time remediation of endpoints

120+ Million
Proven technology with over 120+ million endpoints

200,000
Trusted by over 200,000 customers around the world
